01 PROFILE

I am a dedicated third-year student at Gyalpozhing College of Information Technology, specializing in Blockchain. My passion for leveraging blockchain technology has driven me to undertake several innovative projects, demonstrating my ability to enhance security, transparency, and efficiency across various sectors.

I developed a blockchain-based certificate management system to ensure the authenticity and integrity of academic certificates, eliminating the risk of fraud and streamlining the verification process. Additionally, I implemented a blockchain-based taxi booking services system, addressing data breaches and fostering trust between service providers and customers.

Another significant project worked on is a blockchain-based fake product identification system, which helps consumers and businesses identify counterfeit products, thereby protecting brand integrity and consumer safety.

My journey in blockchain technology is fueled by a passion for innovation and problem-solving. I thrive in collaborative environments and am committed to academic excellence and hands-on project experience. My skills in blockchain technology position me to make significant contributions to the tech industry.

I am eager to continue exploring the potential of blockchain to create secure, transparent, and efficient systems that benefit industries and communities worldwide.

02 EMPLOYMENT HISTORY

Dec 2023 — Present

Thimphu, Bhutan

Market Researcher, UI/UX designer at Zero Pixel Startup Company

Conduct market research to identify customer needs and preferences. Design intuitive user interfaces and engaging user experiences for digital products. Collaborate with cross-functional teams to iterate designs based on user feedback and market trends.
